Employees data (Names, phone numbers, photos) to be synced between their premise and our database

Cloud

NodeJS
Application that needs employees data

Live Data
Synchronization

Users Database

On premise
Active Directory

Tablet that will not authorize access except for Employees registered in the active directory
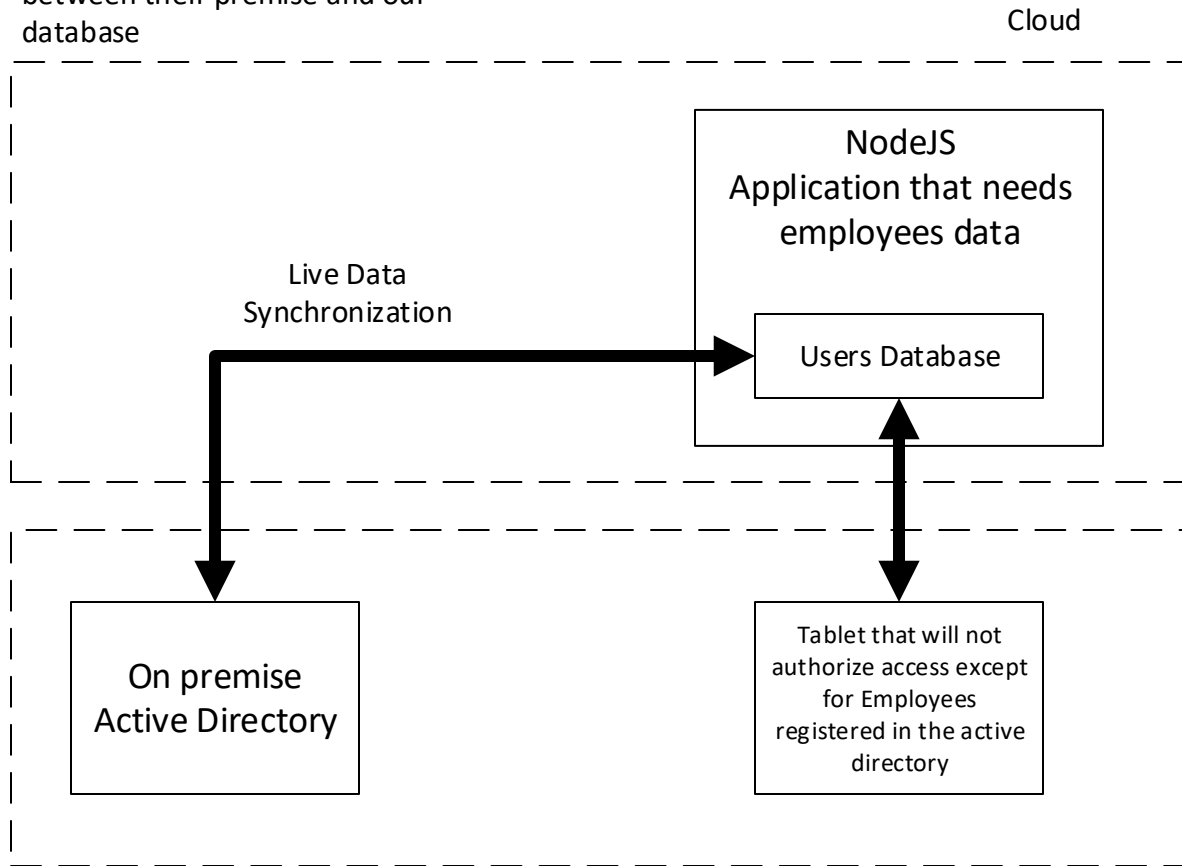

Project requirement:
- Integrate our NodeJS webserver with Microsoft active directory
- Our application database should be in sync with the Active directory so that the corporate employees data be updated automatically in the database
- When a new employee is hired in the company our database add his name, phone, photo, department, etc..
- When an employee leave the company our database deletes his name, phone, photo, department, etc..
